

NTN Lab

An experimental platform to test and
evaluate NTN and TN communications

Context

Why?

- Service continuity
- Service ubiquity

Where?

Challenges

Lots of research subjects and ...

Solution

Simulation

Test

Emulation

Evaluation

NTNLab Environnement

Toolboxes / AI / Cybersecurity

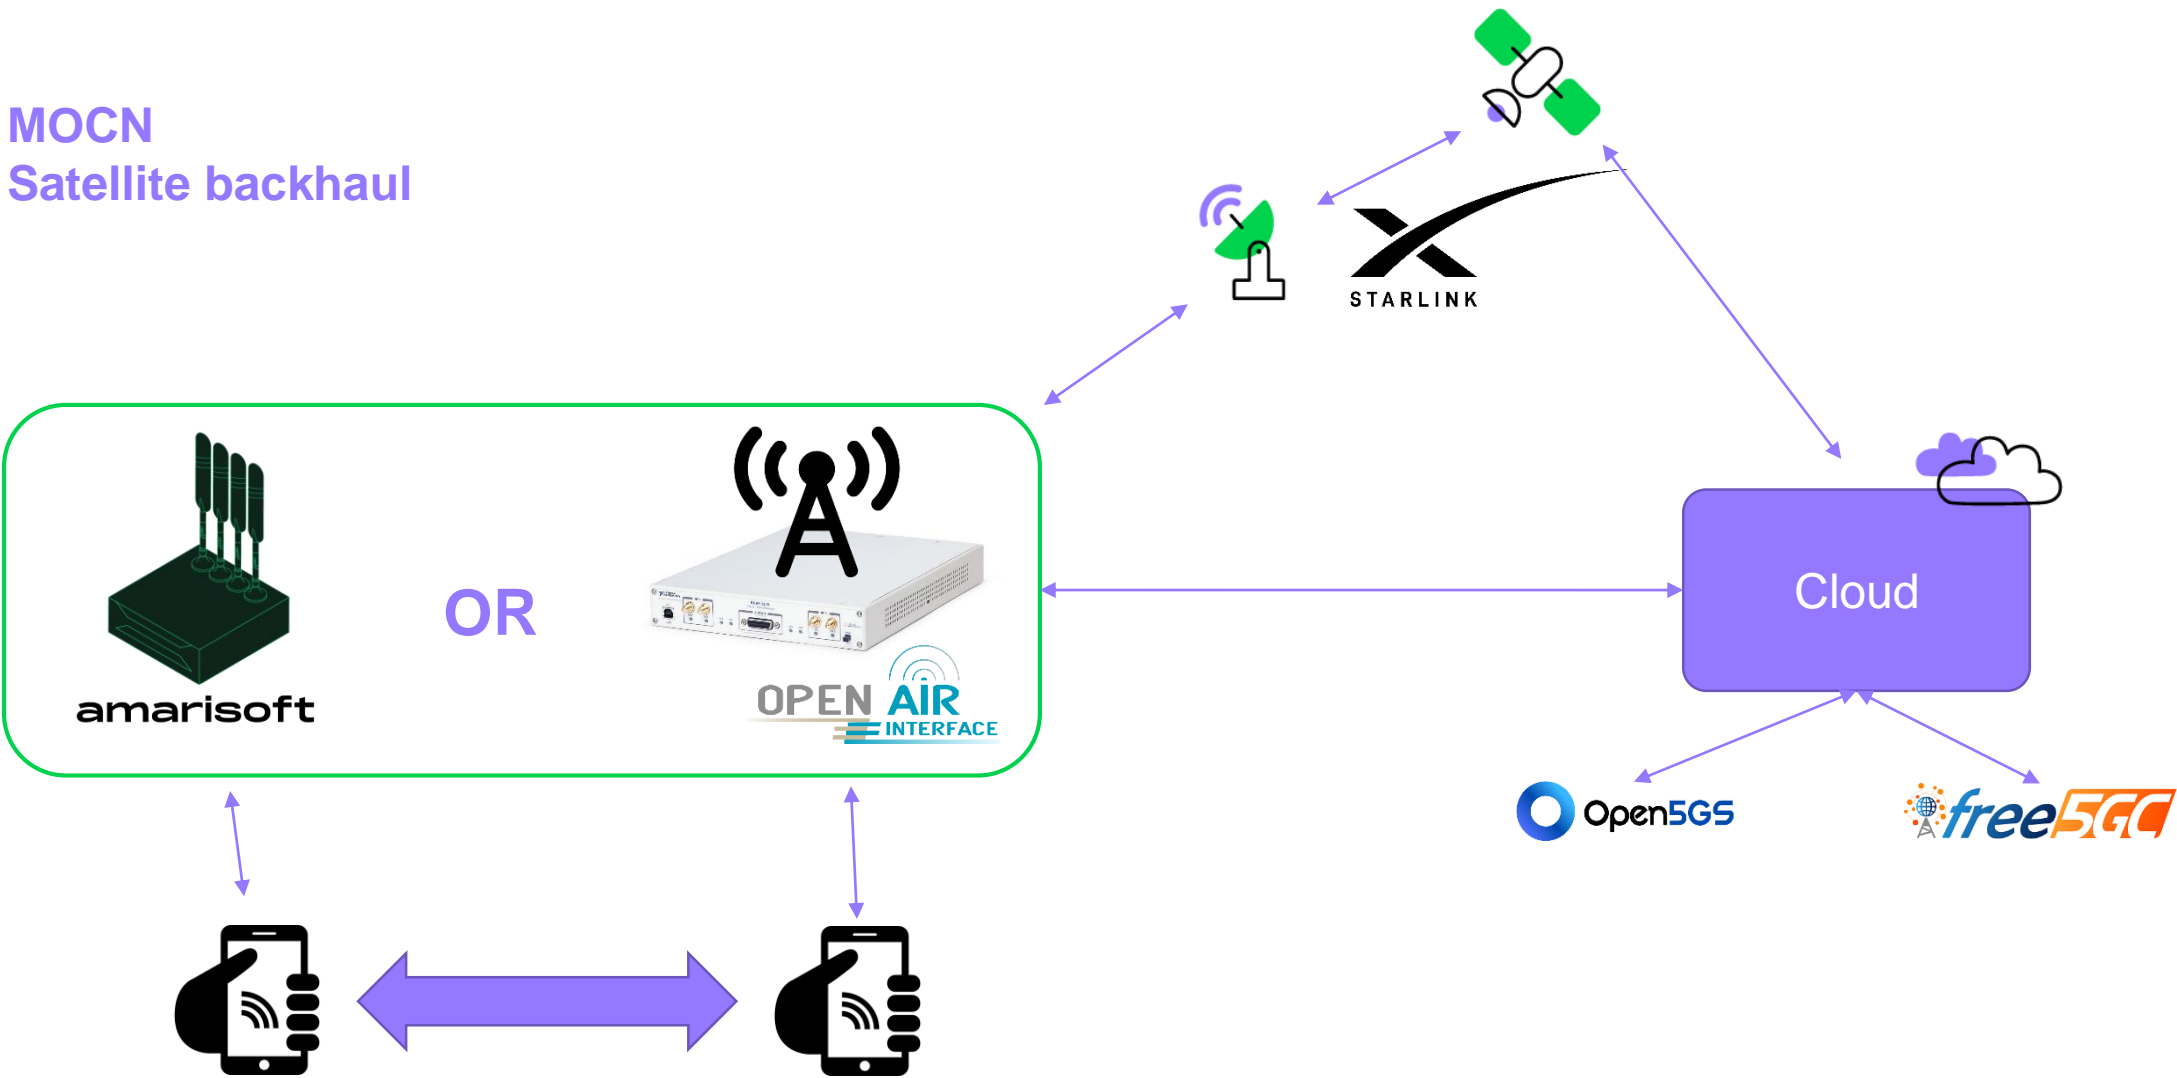

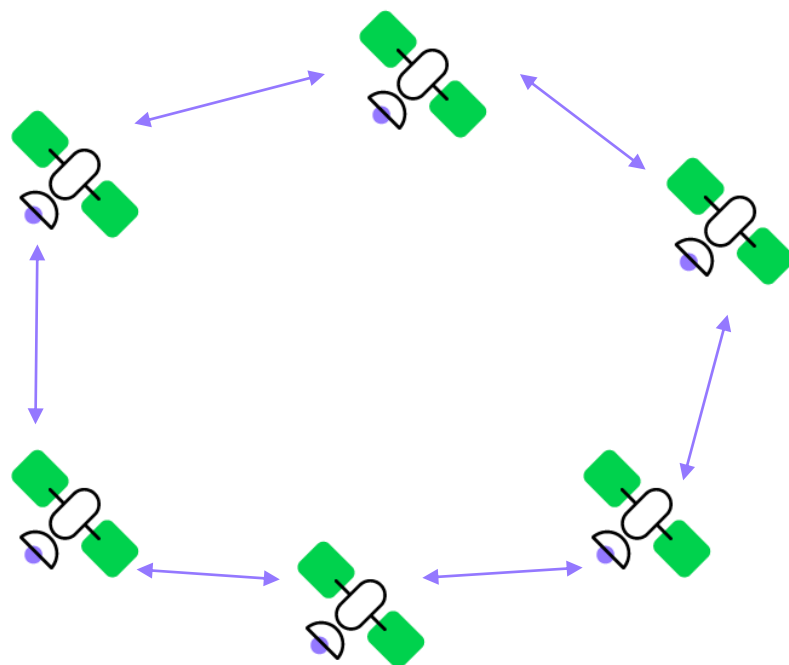

Emulation

E2E 5G

- MOCN
- Satellite backhaul

LEO constellation (under investigation)

- Stargaze
- OpenSN

VIRTUALIZATION

- Explore RAN disaggregation
- Custom routing schemes, protocols
- Build AI / Cybersecurity on top of it

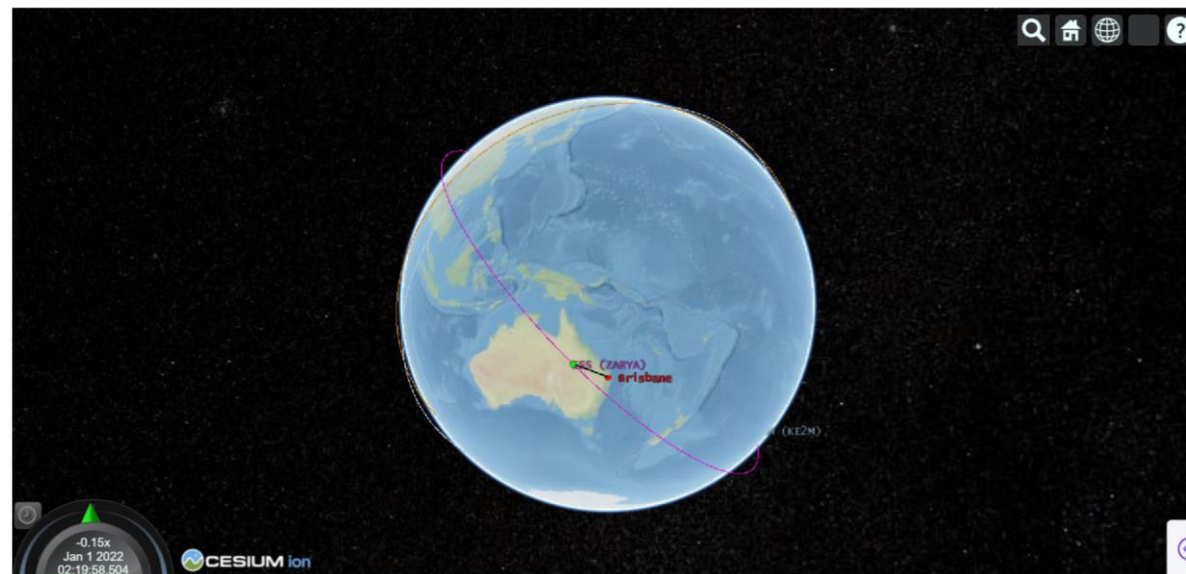

Simulation

Dynamic Link Budget

- Propagator SGP4
- Atmospheric propagation losses
- 3D antenna
- Dynamic visualization

- SNR of satellites
- Footprint on earth
- Revisit time
- Visibility duration

Evaluation

Zero Trust Security(ZTS)

System's breaches & compromised devices

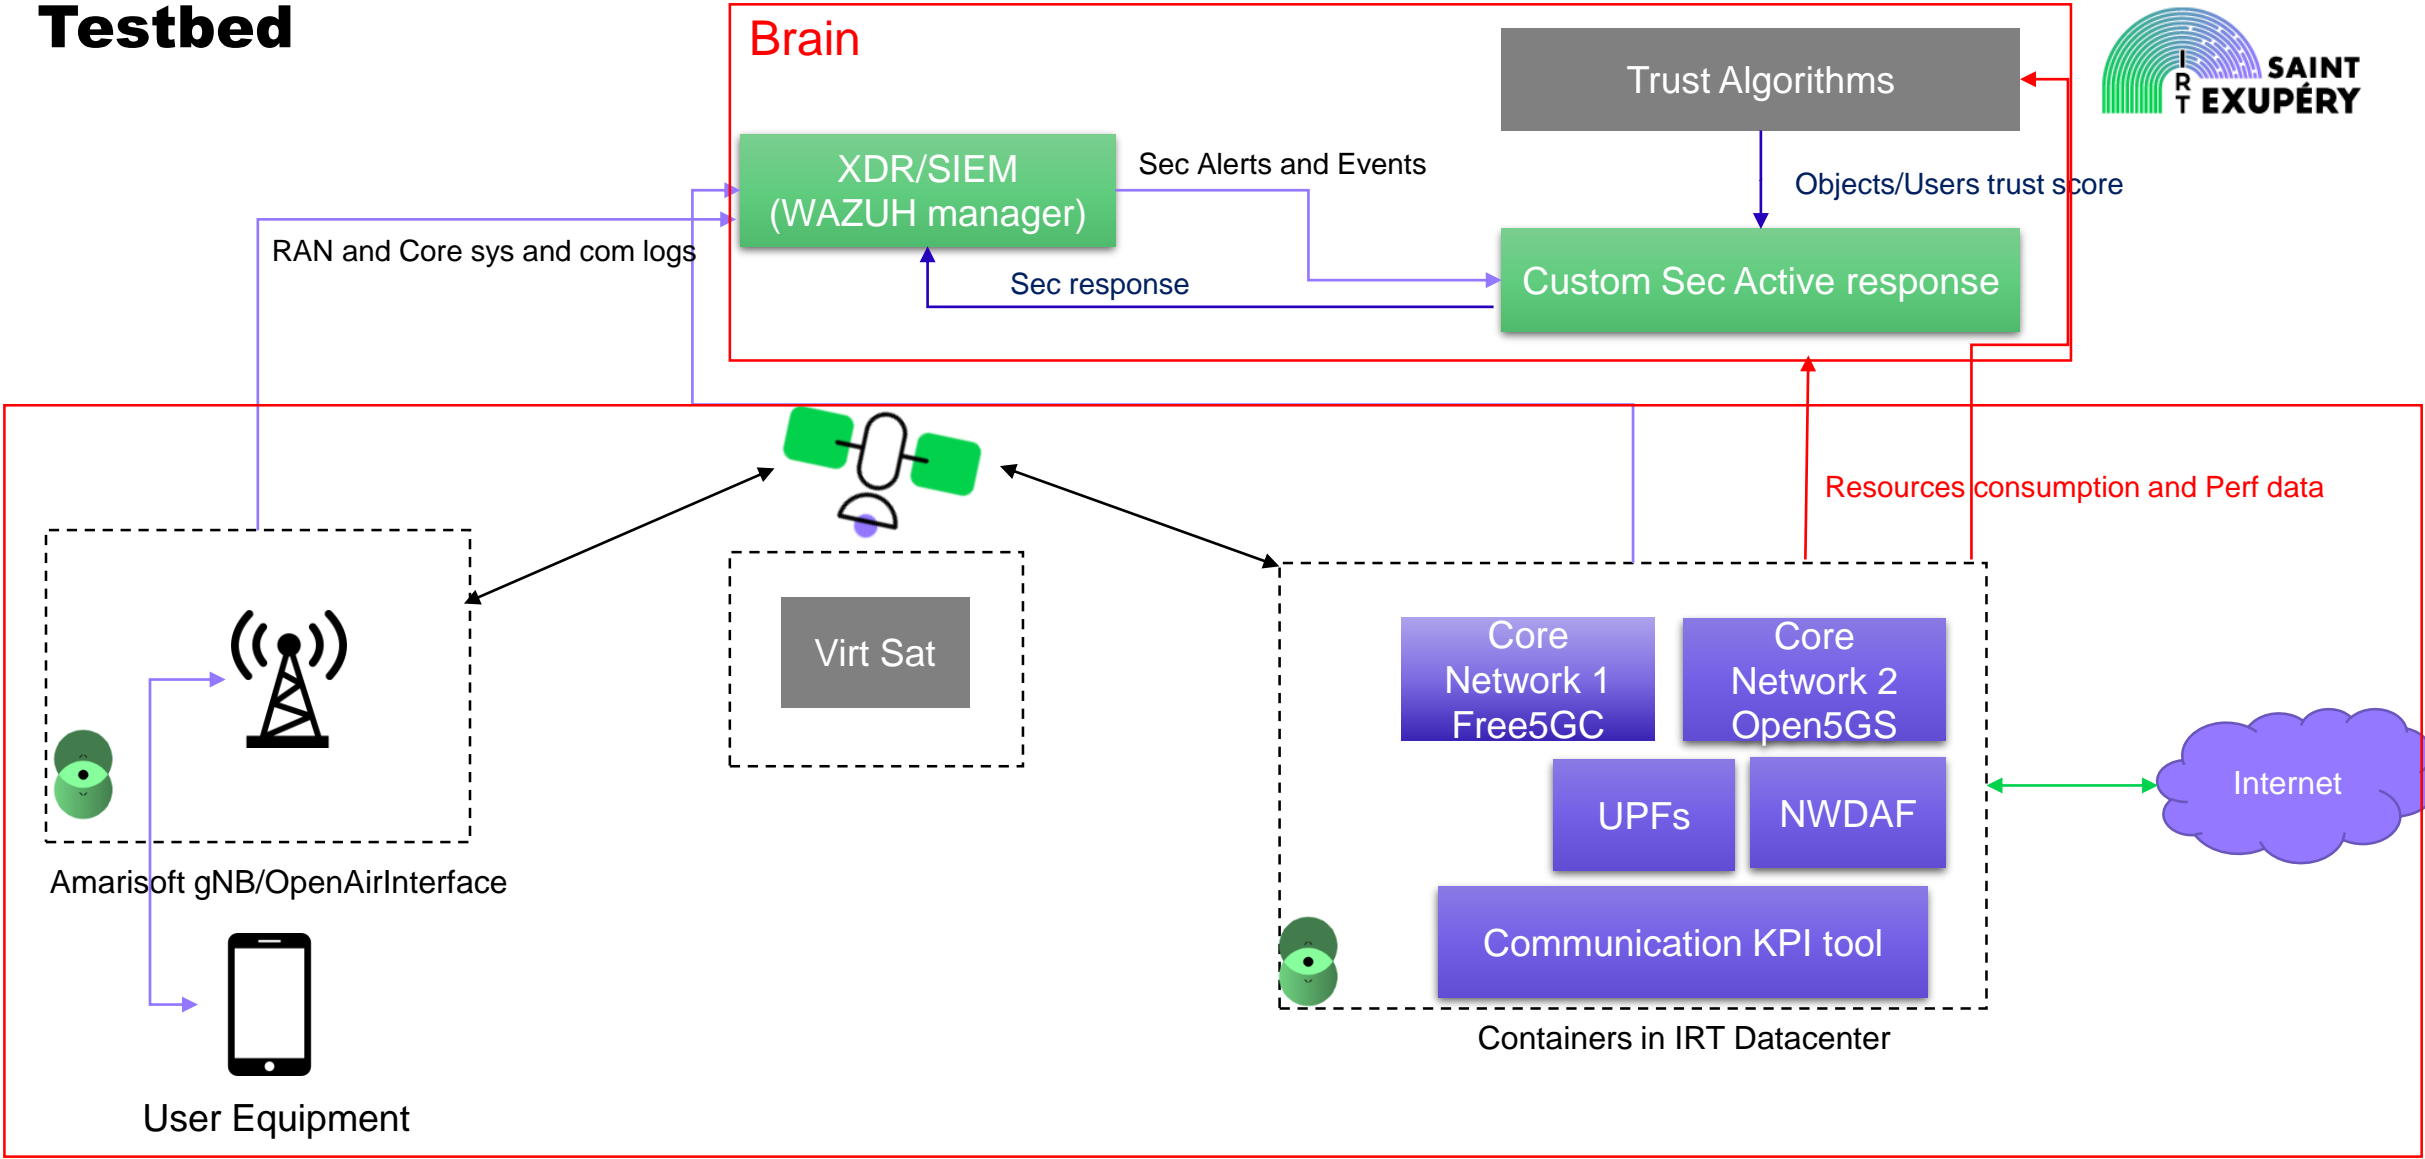

All resources' requests could be malicious

Continuous and aggressive system monitoring, verification

Strong access restrictions and least privilege policies to reduce blast radius

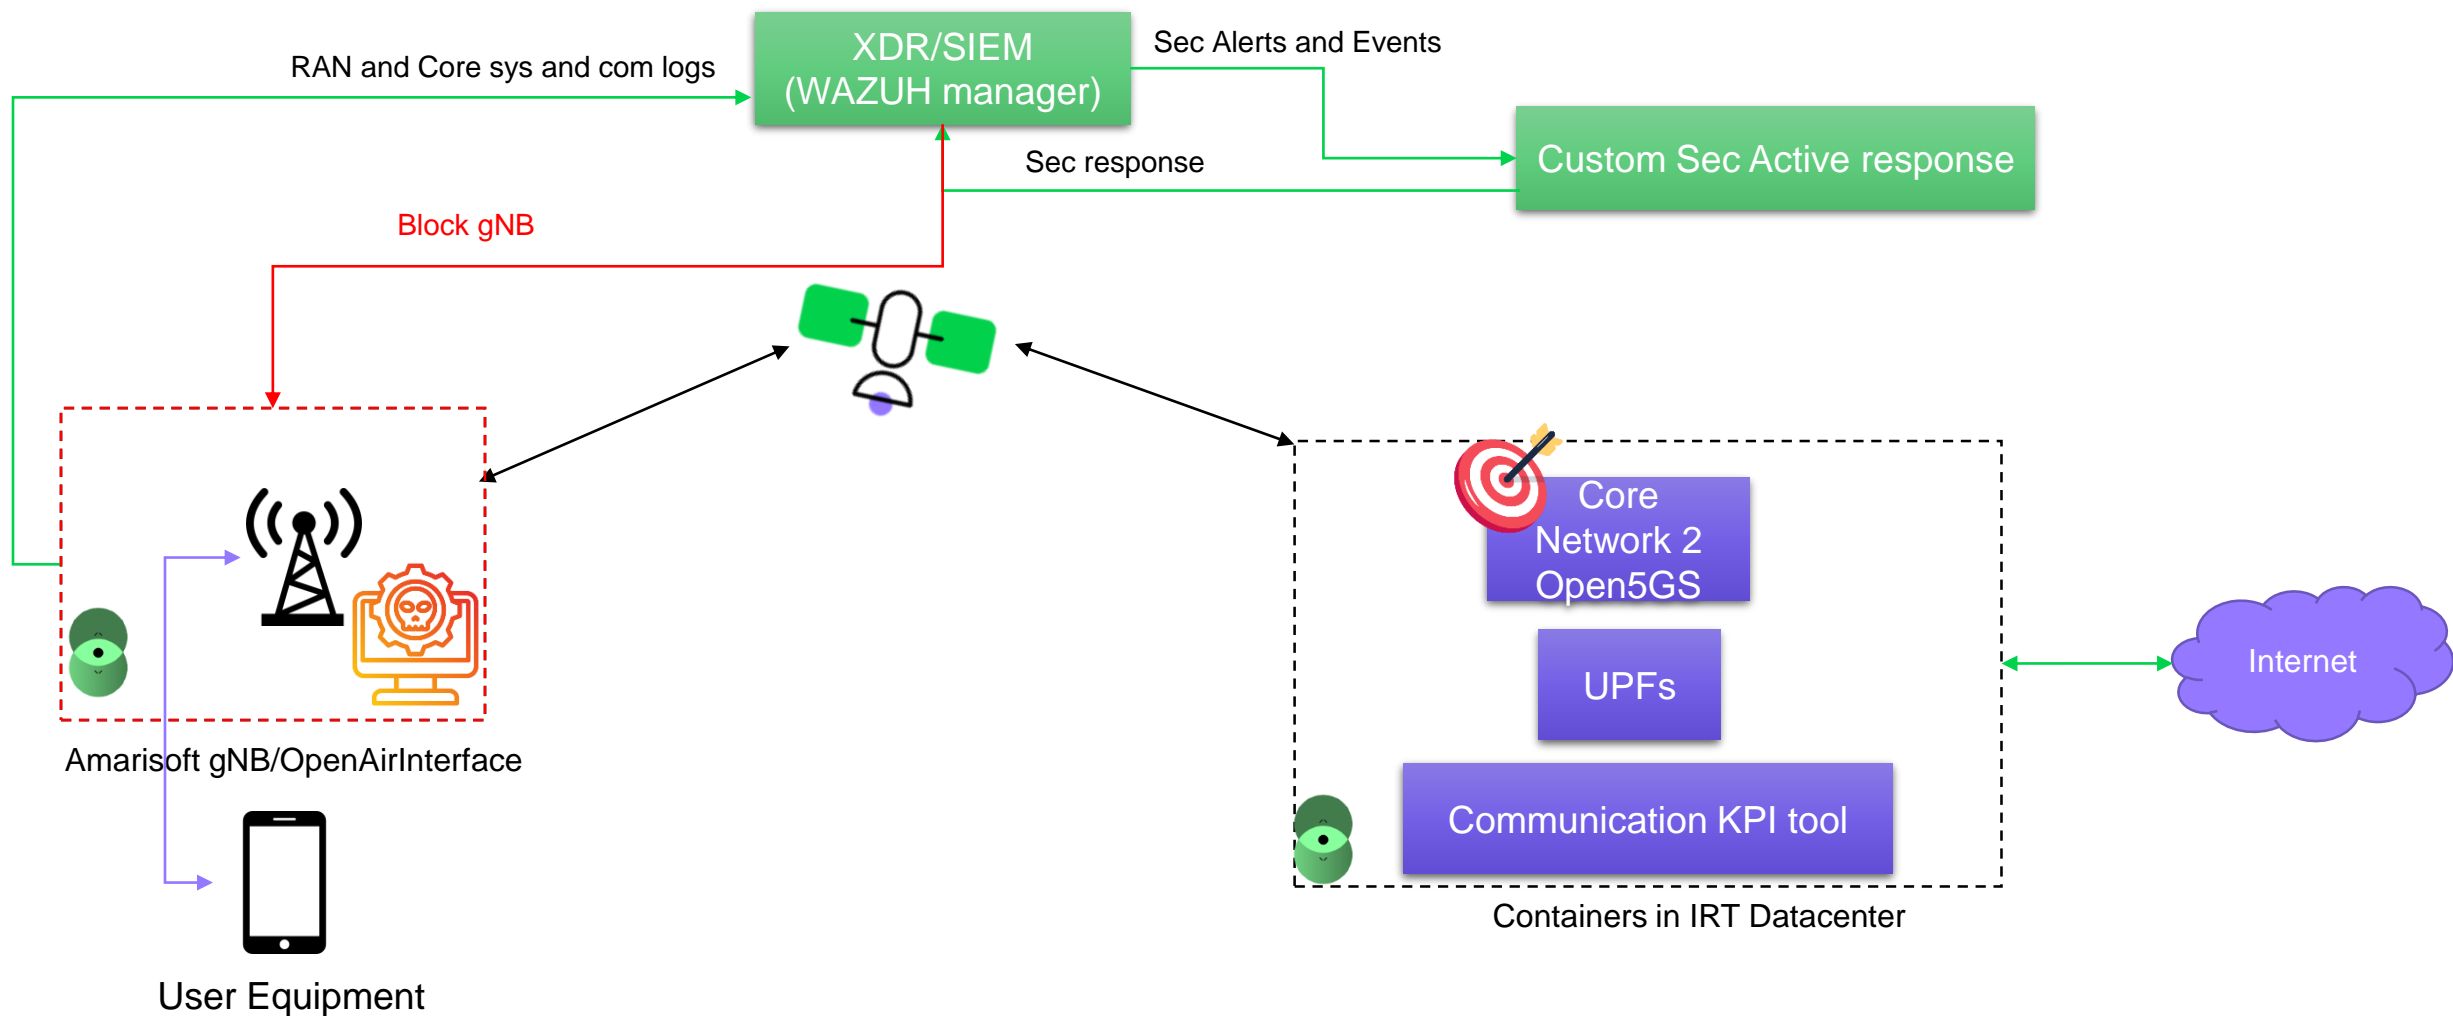

Testbed

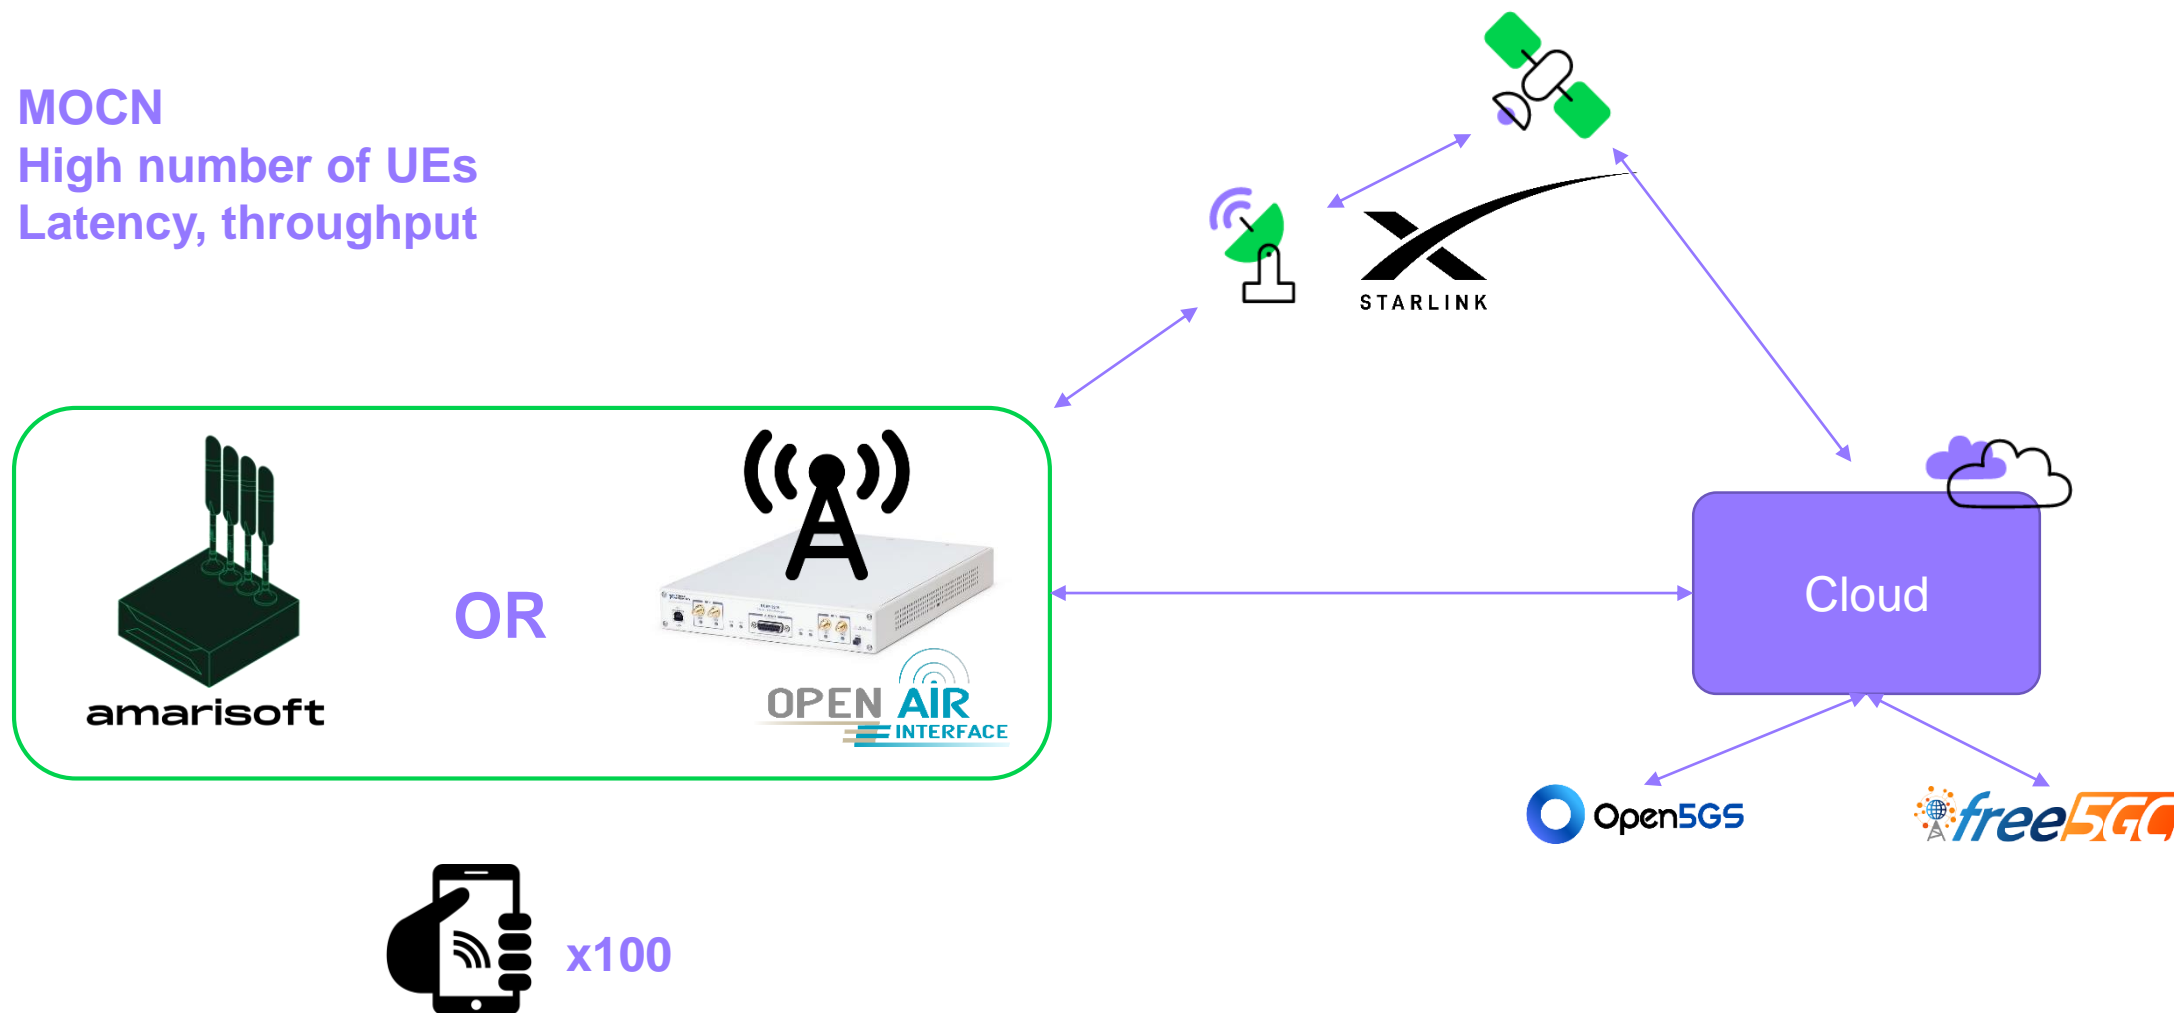

Test

Active response - blocking malicious gNB/UE

Stress Test

- MOCN
- High number of UEs
- Latency, throughput

Perspectives

- « Plug & Play »

- RAN disaggregation

- AI native 6G (PHY and network)

- Cybersecurity

Make NTN Lab grow!

Involved partners

AIRBUS

THALES

toulouse
métropole

 **AUMOVIO**

Projects

- 5GMED
- Airnet
- SuperG
- AutoSat
- Hi5
