Unraveling Temporal Challenges in Space Networking

Juan A. Fraire

inria

Time

System Model

Standard Model written in
Lagrangian Form

Time

$$\begin{aligned}
 \mathcal{L}_{SM} = & \underbrace{\frac{1}{4}W_{\mu\nu} \cdot W^{\mu\nu} - \frac{1}{4}B_{\mu\nu}B^{\mu\nu} - \frac{1}{4}G_{\mu\nu}^{\alpha}G_{\alpha}^{\mu\nu}}_{\text{kinetic energies and self-interactions of the gauge bosons}} \\
 & + \underbrace{\bar{L}\gamma^{\mu}\left(i\partial_{\mu} - \frac{1}{2}g\tau \cdot W_{\mu} - \frac{1}{2}g'YB_{\mu}\right)L + \bar{R}\gamma^{\mu}\left(i\partial_{\mu} - \frac{1}{2}g'YB_{\mu}\right)R}_{\text{kinetic energies and electroweak interactions of fermions}} \\
 & + \underbrace{\frac{1}{2}\left|i\partial_{\mu} - \frac{1}{2}g\tau \cdot W_{\mu} - \frac{1}{2}g'YB_{\mu}\right|^2 - V(\phi)}_{W^{\pm}, Z, \gamma \text{ and Higgs masses and couplings}} \\
 & + \underbrace{g''(\bar{q}\gamma^{\mu}T_a q)G_{\mu}^{\alpha}}_{\text{interactions between quarks and gluons}} + \underbrace{(G_1\bar{L}\phi R + G_2\bar{L}\phi_c R + h.c.)}_{\text{fermion masses and couplings to Higgs}}
 \end{aligned}$$

Time

Forget it!

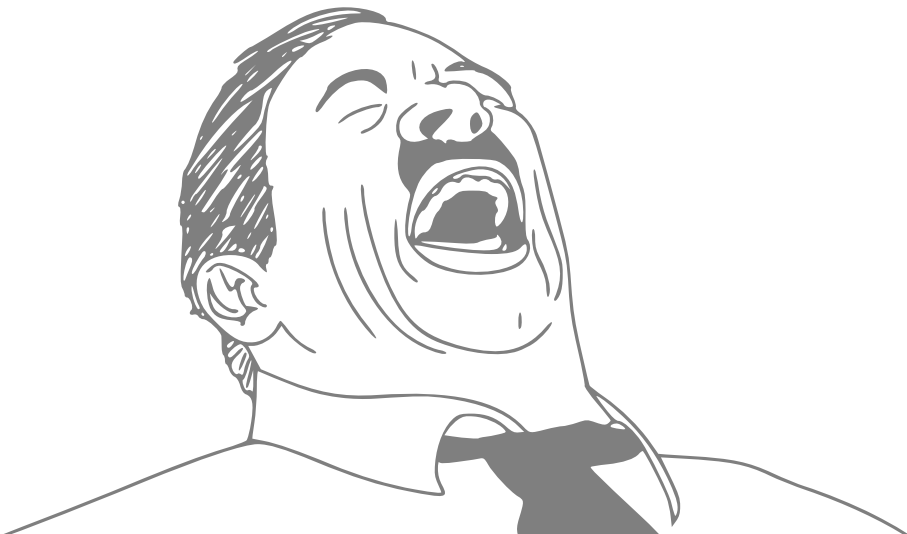

Time

This presentation has

No equations

No plots

No tables

Time

(Newton)

Time is
Absolute

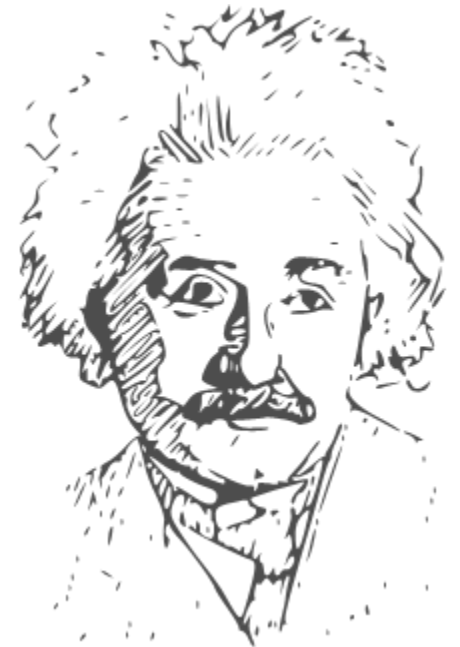

Space \cap Time

(Einstein)

Time is
Relative

Space \cup Time

(Quantum)

Time is
Unimportant

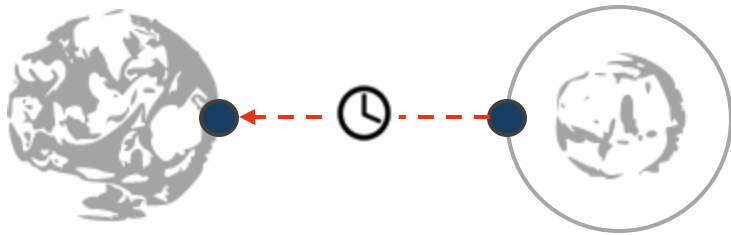

Having challenged humanity's
greatest minds...

...How can time **not be** a
controversial topic in **Space
Networks?**

Delay

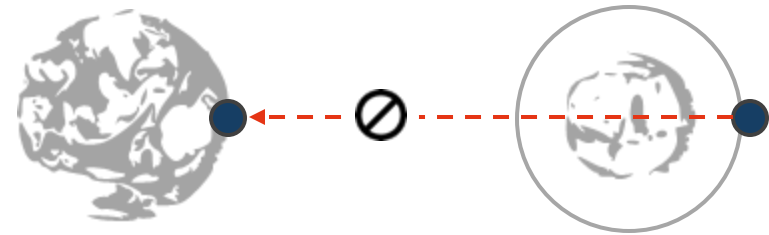

Light-Speed Propagation

Very High Latency
(Temporarily)

Disruptions

Planetary Occlusions

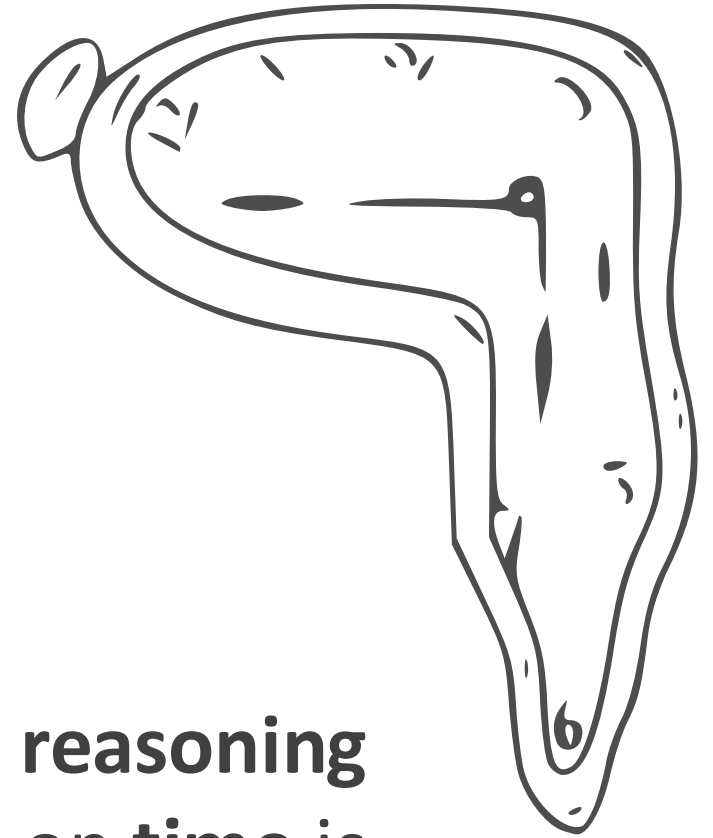

Fragmented Topologies
(Temporarily)

Disruption can be viewed as
merely a **Delay** that extends to
infinity...

... proof of how tricky **reasoning**
on **time** is

Space

Asynchronous

Very High Latency
(Temporarily)

Fragmented Topologies
(Temporarily)

Low Latency
(Stably)

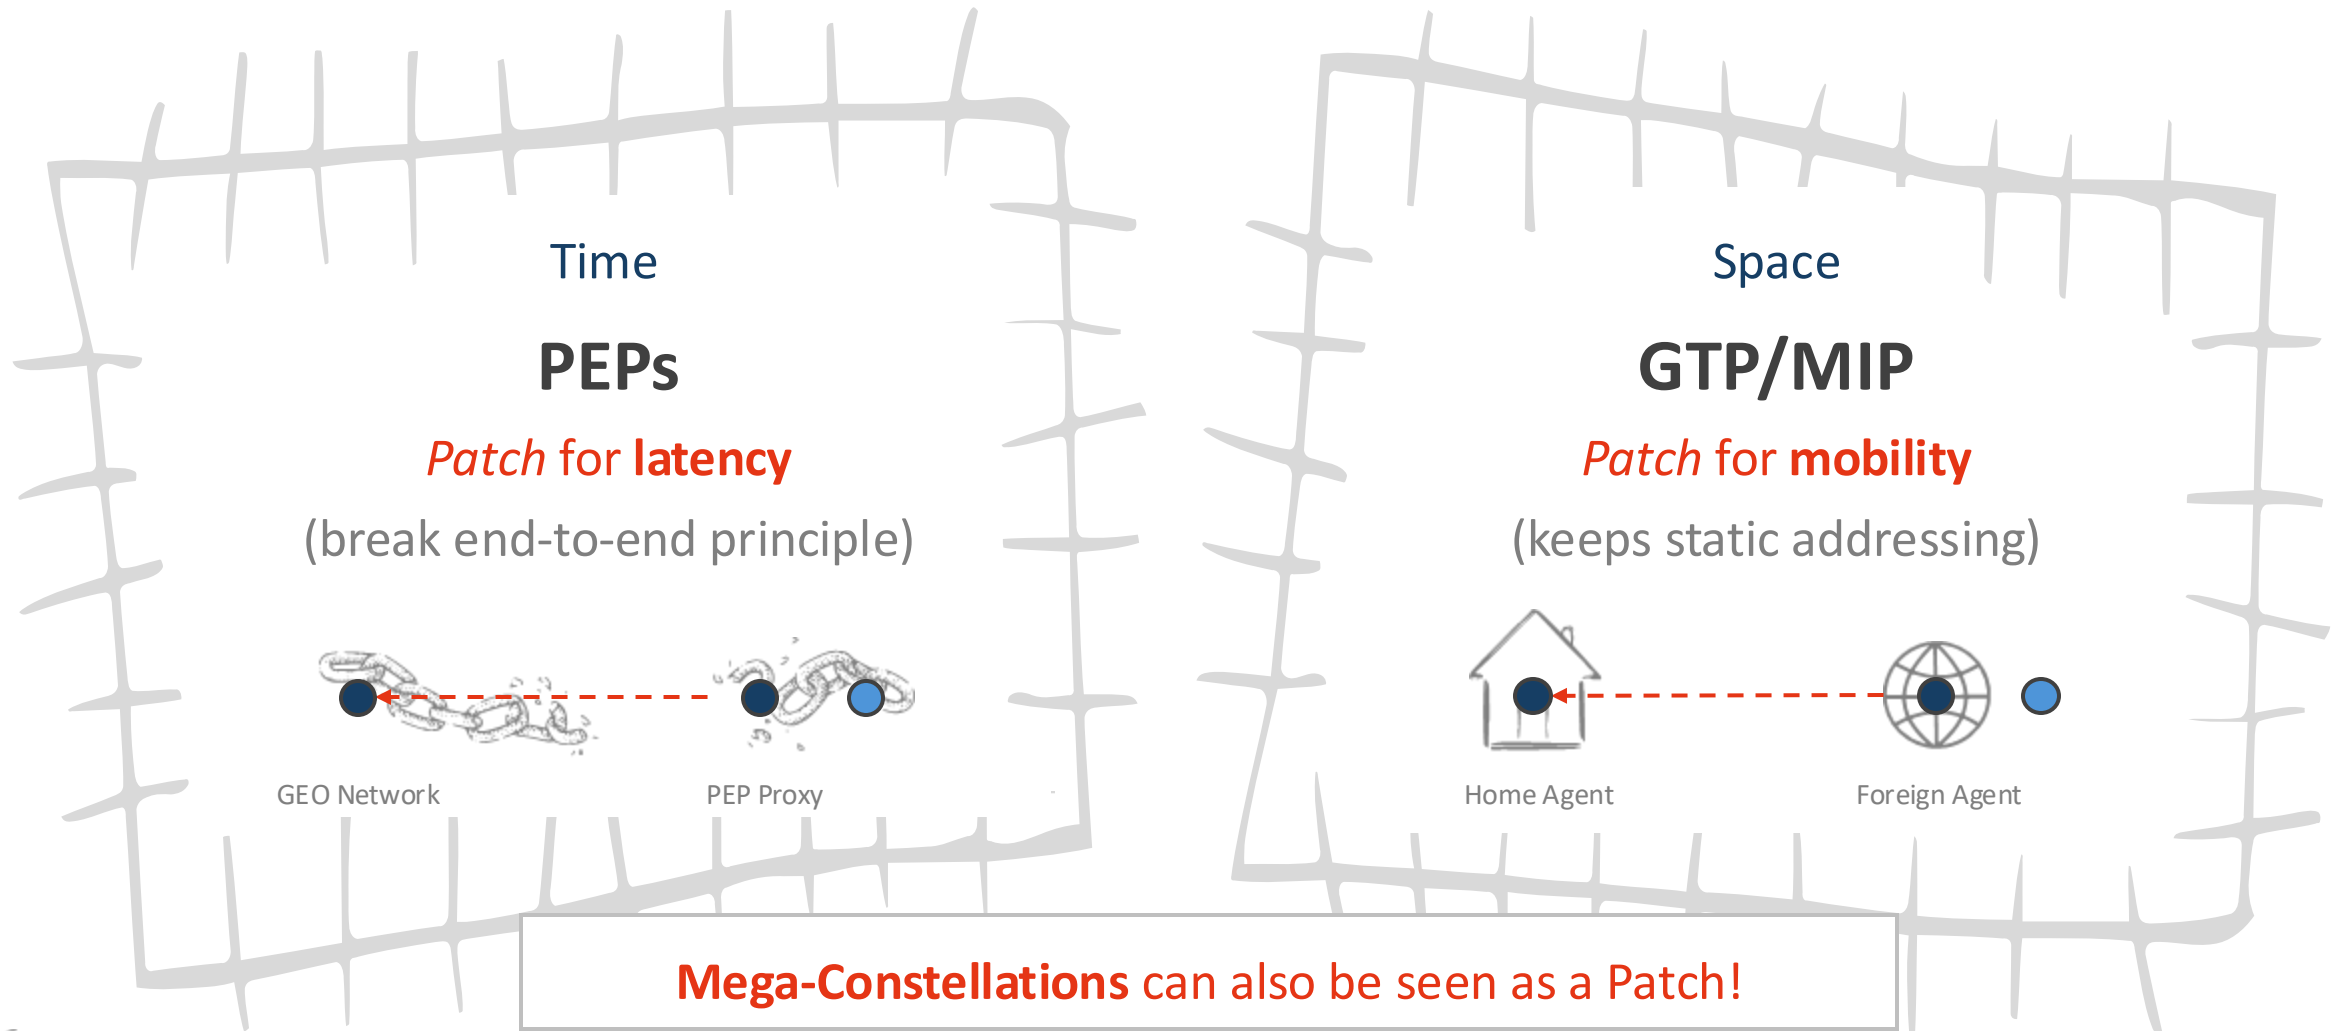

Persistent Paths
(Stably)

Synchronous

Internet

Patches

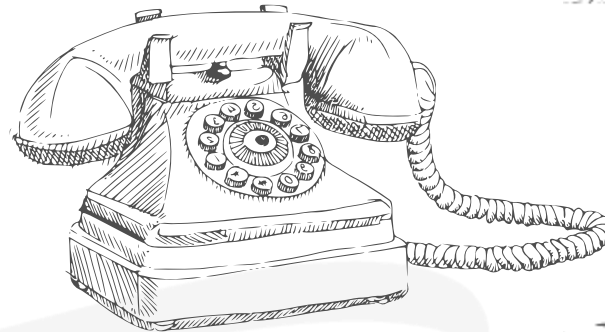

John Day

On the Internet

Built without a **theory: engineering**
first, science later

Names, addresses, and layers confused

Space

Space Network Protocols

In CCSDS Since the 70s

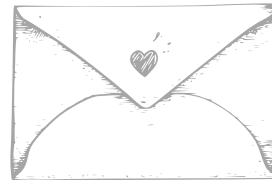

TM/TC
CFDP
...

Very High Latency

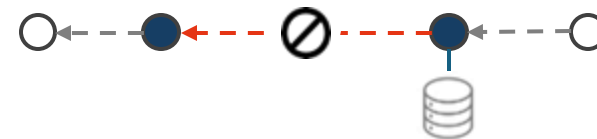

Minimum Feedback

Bundle all info for decoding

A Postal Model!

Fragmented Topologies

Temporary Storage

Until links become available

Space

Space Network Protocols

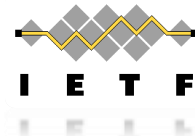

In CCSDS Since the 70s

Very High Latency

Fragmented Topologies

In IETF Since Recently

Time-Evolving

No time - Reach out!

Takeaways

Limitations

Decades of **technical excellence** in space tech hadn't been translated into a **time-embracing Internet**

We just keep patching the Internet!

Ambition

Open, explainable, and implementable
time-aware network models and protocols for a **Space-
Terrestrial Integrated Internet**

At Some Random Bar In TLS at 11pm

#TheBestTeamInTheWorld

Thu Oct 2nd | Morning

Session 5 – IoT NTN Simulation and Optimization (09h00 - 10h30)

09h00 (20 min)

Generating and Visualising Realistic Interplanetary Topologies with ESA's Astrodynamics Software and IPN-v

09h20

RaSat 2: Simulating Cross-Linked Direct-to-Satellite IoT LEO Constellations

Optimizations, and Learning Approaches for Direct-to-Satellite IoT Delay-Tolerant Routing: A-SABR, the Adaptive Library for SABR

Coffee Break - Poster Session

Wireless and DTN Networks (11h00 - 11h50)

Unraveling Temporal Challenges in Space Networking

Implementation of a Native Socket Interface for the Bundle Protocol

Session Chair: Congduc Pham (Univ. Pau) Lucas Poulhe & Alice Le Bihan (INSA Lyon)

Benoît Cougnet & Alexander Choquenaira (Inria)

Diego Maldonado (INRIA / INSA Lyon)

Longrui Ma (Inria)

Session Chair: Emmanuel Lavinal (IRIT)

Juan A. Fraire (Inria)

Sylvain Pierrot (Polytech)

implement and protocols for a Space
ated Internet

Keynote Speakers

Rick Taylor
Aalyria

Felix Flentge
European Space Agency (ESA)

Jeremy Pierce-Mayer
GMV

Co-located with IEEE WiSEE 2025

STINT 2025

Space-Terrestrial Internetworking Workshop

The Forum for Delay-Tolerant and Space Networking Research

📅 October 13–15, 2025 📍 Halifax, NS, Canada

Hybrid Format

Speakers are expected to attend in person; remote participants may join online at a reduced fee.

Welcome Words by Vinton Cerf

The co-inventor of the Internet will open STINT 2025 with remote welcome remarks.

Topology

Determination

Signal received from where the spacecraft
was, not where **it is**

Determining **light time delay** involves iterative
processes that converge on

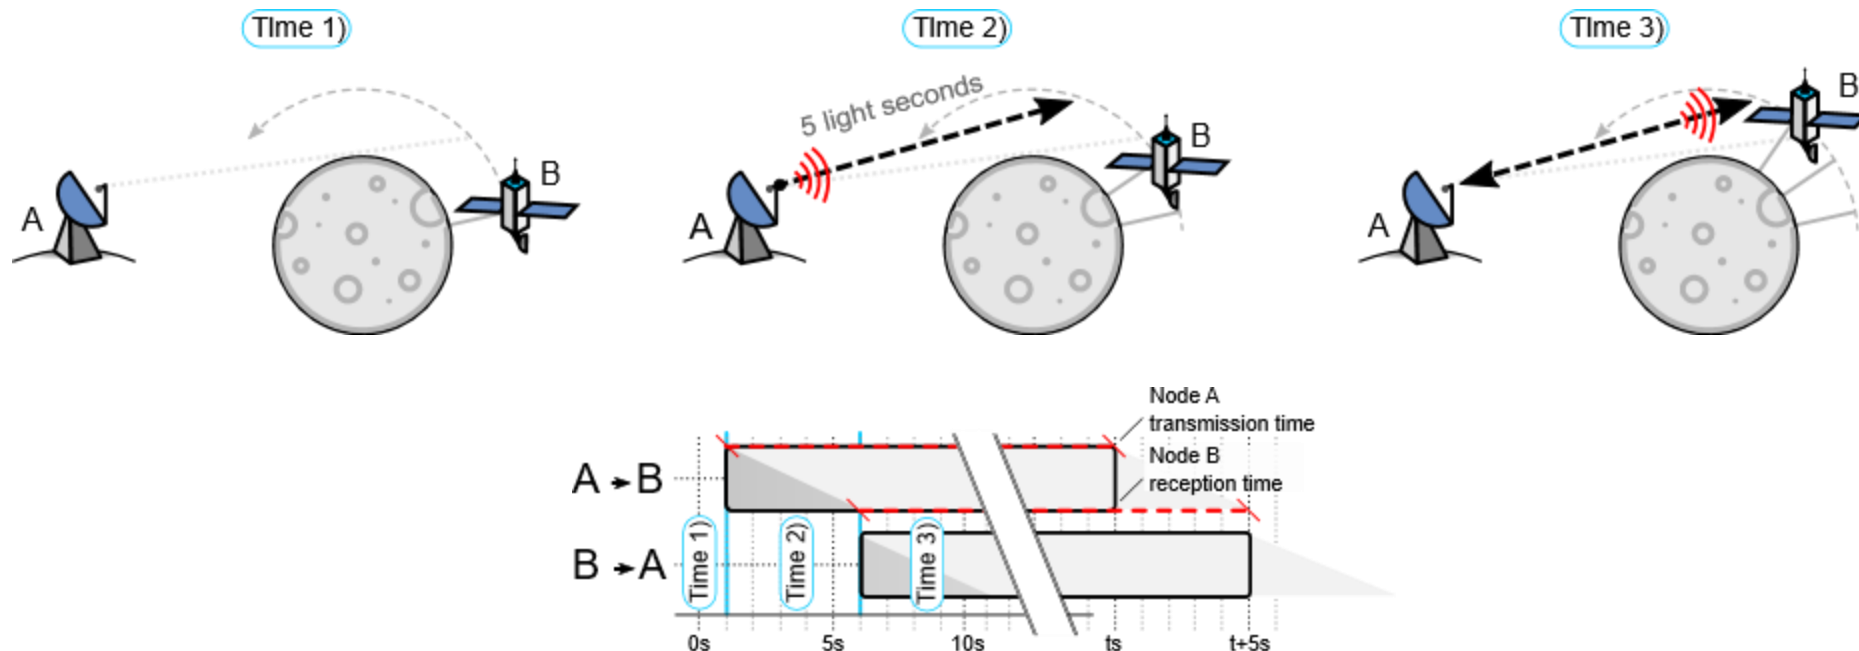

$$\Delta t = r(t)/c$$

(Apparent Position Problem)

Topology

Determination

Contacts are time-wise **asymmetric**, thus better described as **unidirectional**

Topology

Design

Space is vast, links are mostly **point-to-point** (e.g., FSO)

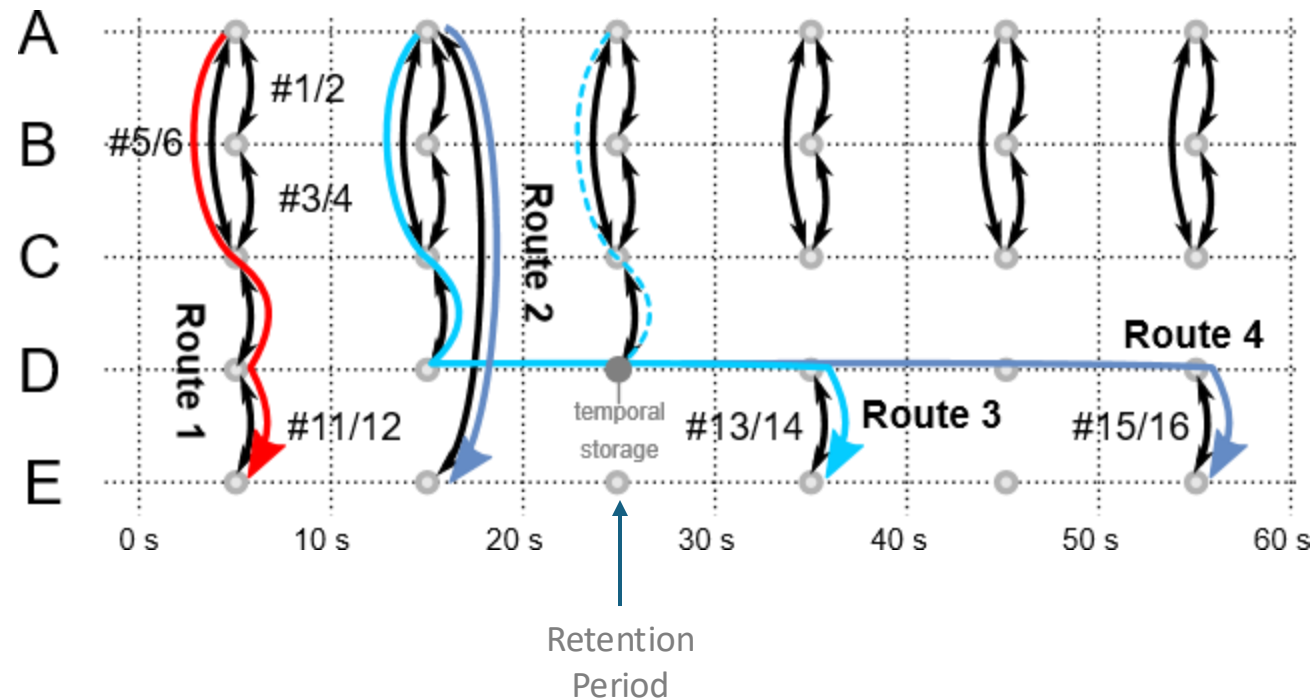

Designing a **contact plan** is a complex continuous optimization process
